

DATABAY RESOURCES®

Cleaner Data. Clearer Decisions.

NavigateNet

Ascertain Your Best Next Steps with NavigateNet

NavigateNet is a powerful, Internet-based data analysis system that converts data into solutions for strategic decision making. More complete data reporting and analysis are vital tools in determining better methods to improve your organization's bottom line.

DataBay Resources NavigateNet can smoothly steer you through a sea of data, providing you with a channel for more effective:

- Business and network development.
- Physician recruitment, retention and resource planning.
- Financial and clinical benchmarking.
- Trend and market analysis.
- Marketing and communications planning.
- Payer contracting and performance improvement.

With NavigateNet, current inpatient, ambulatory surgery or multiple state datasets can be used alone or combined for more complete, flexible analysis, based on calendar or fiscal year, with long-term trending capabilities.

This valuable system streamlines research and analysis while providing limitless reporting flexibility and opportunities for customization. NavigateNet's user-friendly navigation offers drill-down capabilities, exports into multiple software packages, and a direct link to mapping software.

NavigateNet delivers critical information in a user-friendly, flexible format directly into the hands of those who need it most – the people who are responsible for improving the bottom line.

DataBay Resources launched the newest version of NavigateNet – the fastest web-based software currently on the market – in January 2008. New features include:

- **Flexible sub-tabling options** offer functionality to select row and column placement and hierarchy prior to report generation, providing the user with more control over report output.
- **Addition of a Descriptions Tab** allows users to control how clinical and provider data is displayed on reports as well as providing placeholders for additional data such as bed size and street address.
- **New Options for Saving Reports** preserve both report parameters and the final report output in one easy step, promoting consistent formats when batching reports that are produced on a regular basis.
- **Added Display Capabilities** include a new report pagination feature for more streamlined viewing of large reports.
- **Customized Range Selections** allow the user to set ranges for length of stay and total charges to further stratify reports.

DataBay Resources, a division of Amerinet, provides health care market intelligence software to hospitals, health systems and ambulatory surgery centers to improve their market and financial positions and to translate state discharge databases into action plans.

Cleaner Data. Clearer Decisions.

DataBay Resources has established standards that data must meet before it is acceptable for use in our products and services. At DataBay, we understand it is necessary for our clients to have confidence in their decisions, based on data we provide.

Processes have been established to increase both data integrity and usability within our products, including:

- Inspections made on all new data releases to reveal any inconsistencies from prior releases.
- A combination of manual and automated reviews performed at every processing step.
- A multi-faceted testing process that every dataset must pass.
- A data warehouse built on solid data warehousing principles, providing data that is compatible for analysis across both type and source.
- Regular maintenance of provider and geographic files used to define the data.

Providing better data is our priority.

Application Support

The DataBay Application Support Team consistently scores high on customer satisfaction surveys for the depth of their product knowledge, issue resolution, timeliness of response and courtesy. The team has multiple years of experience with DataBay Resources software tools, preparing them to address issues proficiently. By employing remote screen sharing technology, DataBay's Application Support Team pinpoints and resolves customer issues with increased efficiency. A toll-free line and unlimited support is provided to customers at no charge. The DataBay Resources Application Support Team can be reached at 800-974-2627 or applicationsupport@databayresources.com.

About DataBay Resources

With product expertise, quality data and knowledgeable staff members, DataBay Resources assists clients in elevating financial performance by offering technology and services that merge financial, physician and market data. DataBay Resources offers a customized, service-oriented approach that enables customers to understand their market and the competitive forces that influence profitability.

Products and services include:

- **A data warehouse** featuring multiple inpatient and ambulatory state databases, as well as emergency department and financial benchmarking datasets.
- **Data analysis and presentation capabilities** through Navigate and NavigateNet, tools that translate datasets into easy-to-use, logic-based reports, graphs, maps and other presentation formats.
- **Physician manpower planning** through Navigate-MD, which provides comprehensive physician supply data and calculates physician need by offering a choice of either proprietary benchmarks or a nationally-recognized demand ratio.
- **Detailed profit and loss analysis** through Navigate Profitability, which examines and benchmarks an organization's bottom line against a peer group, using MedPAR and individual hospital cost and reimbursement data.
- **Planning analysis and support** on projects for organizations that need to outsource on a singular or longitudinal basis.
- **Customized market, financial and clinical reports** and analysis.
- **Data conversion and editing capabilities** through DataBay Check, software that edits inpatient and ambulatory UB-92/UB-04 data and verifies valid entries in all fields required for submission to state data agencies.
